

## VALUE PROPOSITION

- **Clear Drains:** Improved drain flow, preventing slow drains and backups
- **Odor Reduction:** Significantly reduced unpleasant odors, creating a more pleasant environment for patrons
- **Cost Savings:** Estimated annual savings of over \$10K by reducing maintenance and plumbing costs, and improving the overall guest experience

### PRODUCT

**Dymon® LIQUID ALIVE®**  
Enzyme Producing Bacteria

### BOTTOM LINE

**Improved Guest Experience and Cost Savings**  
*Hospitality: Casino/Resort Property*

### APPLICATION

- Drain maintenance (for slow drains) and odor control on a casino/resort property

### ISSUE

- The casino/resort faced multiple maintenance challenges, including slow draining hotel room drains, hotel drains with odors, slow draining kitchen grease traps with unpleasant odors, and slow drains with odors in public restrooms (toilets & urinals). Additionally, there were unpleasant odors associated with dumpster locations. These issues contributed to an unpleasant experience for casino patrons, potentially resulting in lower patron traffic, but also frequently required the costly intervention of plumbers to fix the recurring problems.

### SOLUTION

- Dymon® LIQUID ALIVE® Enzyme Producing Bacteria

### RESULT

- Dymon® LIQUID ALIVE® improved drain flow and substantially reduced odors across a wide variety of applications. This enzyme-producing bacteria digested and liquefied organic waste, grease, and food by-products, eliminating malodors and reducing suspended soils. Its high resistance to disinfectants, detergents, sanitizers, and free chlorine ensured consistent performance. Additionally, the need for plumbers to fix slow drains and odors was significantly reduced, contributing to estimated annual savings of over \$10K in maintenance costs. This improved the overall guest experience and contributed to increased patron traffic.
