REGULATORY OVERVIEW

WHAT ARE VOCs?

The acronym VOC stands for “Volatile Organic Compound”. In general, VOCs are chemicals that contain carbon and evaporate at room temperature and pressure. The term includes all sorts of common solvents as well as gases (e.g. mineral spirits, xylene, propane).

WHY ARE WE CONCERNED ABOUT VOCs?

VOCs evaporate and chemically react with car emissions and other pollutants to form ground-level ozone (i.e. smog). Ozone is a reactive molecule that attacks the lungs. Therefore, smog contributes to respiratory problems such as asthma, pneumonia and bronchitis.

HOW ARE VOCs REGULATED?

VOCs can be regulated by various levels of the government: federal, state and local. The U.S. Environmental Protection Agency (EPA) has established ‘safe’ levels of ground-level ozone and developed air quality standards to ensure compliance. In order to meet EPA’s standards, several states adopted regulations that limit the amount of VOCs in consumer products by product type and category. These regulations are generally referred to as the Consumer Product Regulations.

Although Federal regulations do exist, they have been largely obsoleted by stricter state-level regulations. The California Air Resources Board (CARB) has developed some of the strictest regulations in the country and continues to adopt lower VOC limits. The Ozone Transport Commission (OTC) has developed Model Rules that member states can use as a guide for their own Consumer Product Regulations. The most recent version (OTC Phase V) has yet to be adopted by any OTC state.

The air quality in some areas of the country, most notably southern California, is so poor that local governments decided there was a need to further limit VOCs. The main difference between these local regulations and the state-level Consumer Product Regulations is the approach they take. The Consumer Product Regulations restrict the **SALE OF** certain products while local rules generally restrict the **USE OF** products in certain applications. Also, the Consumer Product Regulations do not regulate industrial products (those used in the manufacturing process) while local rules typically cover any product if it is used in a particular application. This requires the end-user to make informed decisions about which products are compliant for their particular use. Local regulations, especially those in California’s South Coast Air Quality Management District (SCAQMD), can be very confusing. Since the type of discussion that would be required to explain these rules is beyond the scope of this guide, we recommend partnering with product manufacturers and distributors/retailers to determine the exact impact of these regulations on your business.

WHAT IS A CONSUMER PRODUCT?

The Consumer Products Regulations define a consumer product to be a chemically formulated product used by household and institutional consumers. Basically, unless the product is used in a manufacturing process, it is a consumer product and must meet the VOC limits specified in the Consumer Products Regulations in order to be sold.

WHAT DOES “NOT FOR RETAIL SALE - FOR USE IN THE MANUFACTURING PROCESS ONLY” MEAN?

Consumer Products Regulations allow the sale of high-VOC lubricants and general purpose degreasers if these products are sold exclusively to establishments that manufacture or construct goods or commodities and are labeled as follows:

- In states adopting OTC Model Rule: “not for retail sale”
- In California: for “use in the manufacturing process only”

WHAT IS THE DISTRIBUTOR’S RESPONSIBILITY?

When the sale of a product is regulated, the distributor is responsible for selling VOC compliant products in affected states and ensuring that products labeled “Not for retail sale - for use in the manufacturing process only” are sold exclusively to manufacturing establishments. Enforcement action, including fines, could be taken against a distributor that fails to comply with sales restrictions.

WHAT DOES ITW PRO BRANDS OFFER AS A SOLUTION?

ITW Pro Brands provides a wide variety of 50 State Compliant products and continuously monitors developments affecting consumer products to ensure its customers have the latest information available. We offer this VOC Guide (URL: https://www.itwprobrands.com/files/technicaldocs/LI924_ITW_Pro_Brands_VOC_Guide_240207-8.pdf) to assist our customers in determining the compliance status of regulated products.

CONSUMER PRODUCT REGULATION - 2024 UPDATE

JURISDICTION	REGULATION
California	CARB Consumer Products
DC, IL, IN, MA, ME, NJ, PA, & VA ¹	OTC Phase II
CO, CT, DE, MD, MI, NY, OH, RI, NH, & UT ²	OTC Phase III/IV
Canada	Volatile Organic Compound Concentration Limits for Certain Products

¹ Northern VA, Fredericksburg and Richmond VOC Emission Control Areas

² Box Elder, Cache, Davis, Salt Lake, Tooele, Utah, Webber Counties

The following spreadsheet discusses the compliance status of affected LPS®, SCRUBS®, and Dymon® products with regard to Consumer Product Regulations adopted by various states. Products not listed are not currently regulated. For questions regarding how other regulations, such as SCAQMD rules, affect ITW Pro Brands’ products, please contact our Technical Department at 800-241-8334.

Products listed as Manufacturing Use Only (MUO) are labeled and formulated for industrial users. These products do not meet VOC limits for household and institutional consumer use.

Compliant: Meets VOC regulations

Non-Compliant: Does not meet VOC regulations

Manufacturing Use Only (MUO): Product can be sold to manufacturers but not to the general public

Note: For non-compliant or Manufacturing Use Only (MUO) products, compliant alternates are listed when possible. In cases where both US and Canadian alternate part numbers exist they are shown as follows: (C)XXXX
